The graph shows the speed-up over four-GPU DGX-1V for different numbers of GPUs. The speed-up is indicated by the performance of DGX-2 and DGX-1V. For example, with 16 GPUs, the speed-up is 2.4X compared to four GPUs.

- **DGX-2** (green triangles) shows a clear increase in speed-up as the number of GPUs increases.
- **DGX-1V** (gray squares) also shows an increase in speed-up but at a slightly lower rate compared to DGX-2.

The x-axis represents the number of GPUs, ranging from 2 to 256, and the y-axis represents the speed-up. The graph highlights the performance advantage of DGX-2 over DGX-1V.
